CDPH ZIKA UPDATES

EXECUTIVE SUMMARY

The Medical and Health Coordination Center (MHCC) continues to be activated in response to the Zika virus disease. The California Department of Public Health (CDPH) and Emergency Medical Services Authority (EMSA) are currently the only Emergency Function 08 (EF 08) partners at the state level reporting on this activation.

The MHCC is coordinating with EF 08 partners, healthcare facilities and local health departments (LHDs) to ensure responses are timely and accurate.

CDPH and EMSA Duty Officer Programs are monitoring the Zika virus disease outbreak after hours and remain in communication with the Regional Disaster Medical and Health Coordination (RDMHC) and the Medical Health Operational Area Coordination (MHOAC) Programs throughout California.

As of Friday, March 17, 2017, there have been 524 travel-associated Zika virus infections in California. This number reflects an increase of 14 from the 510 cases reported on the last situation report (3/08/17). CDPH centers and programs continue to monitor Zika virus disease and provide information to the MHCC related to their specific activities on a weekly basis.

Please see attached report for further information.

WEATHER OF CONCERN

Weather of Concern

- A Pacific storm system expected to move through Northern and Central California tonight through early in the weekend bringing a moderately strong storm system

Active Weather Warnings, Watches and Advisories by County:

- http://www.wrh.noaa.gov/sto/brief/www_bc_cal.php - Temporarily unavailable. NWS is in the process of repairing the page

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

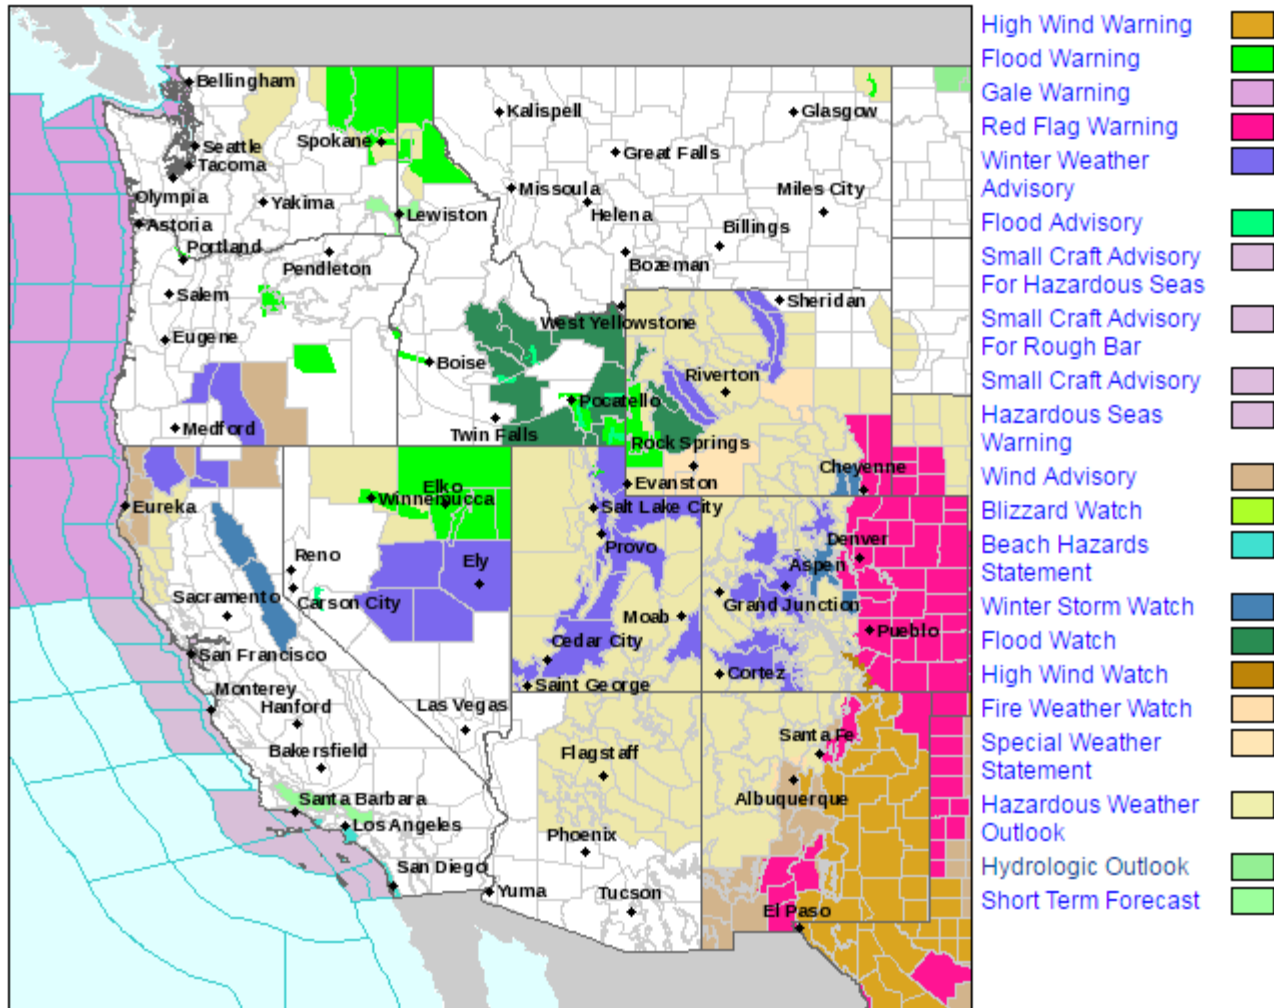

An unsettled weather pattern will continue well into next week. A few more weather systems are expected to move through Northern California before a bit longer dry spell returns later next week. The next weather system is already approaching the coast and will move ashore later today and spread precipitation inland tonight and Friday. Periods of light precipitation will continue Friday night through Sunday morning for many areas, then another wet system will move ashore later Sunday and linger Sunday night with more widespread precipitation again over the region. Mostly mountain showers are expected Monday and Monday night followed by dry weather Tuesday. Wednesday also looks dry in most areas outside of the far northern portion of the region where some showers may occur. Snow levels will drop to around 4000 ft in the NW to 5000-6000 ft across the Sierra at times Friday through the weekend. Some areas will see moderately strong, gusty southerly winds tonight and Friday as well, with those winds likely to develop again Sunday. Moderately strong, gusty north winds may develop overnight Monday and continue Tuesday throughout the region.

SOUTHERN CALIFORNIA

Mostly sunny and warmer conditions are expected today as high pressure briefly makes a return to the area. Some gusty north and northwest winds of 20-30 mph will continue through the morning hours in the Kern County Mountains, the I-5 Corridor and adjacent areas of the desert. These winds will slowly decrease this afternoon. Some cumulus clouds may develop near the Sierras, but no additional rainfall will occur today. However, another system will reach the area Friday, slowly bringing a band of rain into the area through Saturday. The storm will first reach the Central coast and Sierras from Fresno County northward Friday afternoon before turning toward Southern California early Saturday. This second system does not have as much cold air associated with it and precipitation amounts will be substantially less than occurred earlier this week. In all, 1-2" of rain is expected in the Sierras and Central coast, 0.50 – 1.00" over Ventura and Santa Barbara with 0.10 – 0.25" from Los Angeles County south and eastward through Saturday. The snow level will generally be around 6,000' with most accumulations remaining north of Yosemite N.P. The storm will depart the region by Sunday. Temperatures will be cool this weekend with highs in the 40s in the mountains to the 60s at lower elevations. Another storm may bring additional light rainfall Sunday night into Monday. By the middle of next week, a low pressure area may burrow into the Southwest, resulting in light offshore flow and warmer temperatures.
